

**American Ultraviolet Floor Cure Systems** are designed to provide UV-cured protection that improves the life, productivity and appearance of solid surface flooring.

### Applications

Floor Cure systems from American Ultraviolet cure clear coatings on concrete, marble and even hardwood floors, and are commonly used in showrooms, manufacturing and processing plants, warehouses, hospitals, assisted living facilities, commercial office space and residential properties – anywhere you want solid surface flooring to look good and last a long time. The Floor Cure also cures clear coatings on walkways, safety striping and signage, allowing for quick and easy cleanups.

**The Floor Cure** is self-propelled, enabling the operator to simply walk behind the unit, guiding its direction – no pushing necessary. This “green” technology cures coatings quickly, emits no VOC’s, is low odor, and is the most cost-effective method for protecting and maintaining floors. The result is an immediately usable, long-lasting floor that is exceptionally durable and very easy to maintain. Floors look great, and annual floor maintenance costs are reduced, because floors won’t need to be recoated as often and fewer maintenance supplies will be required.

### Benefits

- Self-propelled – no pushing necessary
- “Green” – no VOC’s, exposure to solvent vapors or flammability
- Variable speed control settings and easy access control panel
- 200-240VAC, 30 Amp operation
- Emergency shut-down

Prolonged, direct exposure to UVC light can cause temporary skin redness and eye irritation, but does not cause skin cancer or cataracts. American Ultraviolet systems are designed with safety in mind and, when properly installed by a professional contractor, do not allow exposure to UV irradiation and allow for safe operation and maintenance.
